

First Name (optional): _____

Last Name (optional): _____

Age:

Race:

Ethnicity:

Birthplace:

Where you have lived (list all general areas and for how long):

Q1.

[insert image of face]

How attractive do you think this person is (1-10)? _____

How symmetrical do you think this person is (1-10)? _____

Note: This is an example of what each of the questions should look like. We want the first page to be as the first page of the document is where there are only questions regarding background and name. Then, we want the example question, as shown above, on individual pages. We have a sample of ____ pictures, and each survey should have 20 questions. These 20 questions should be randomized in terms of what faces are pulled from the whole sample, and therefore, the faces would be in a randomized order. I was wondering if we could also have the code after just in case we increase the sample size of the pictures, as access to the code would allow us to add these pictures in. For the results, we just need to know what scores they put for what image and the background information. Thank you so much for your help!
